The ITRC Data
Breach Report is
sponsored by:

IDT911 delivers a comprehensive suite of breach mitigation and identity management solutions to empower you to:

- Reduce your risk of a data breach occurring
- React swiftly and appropriately in the event a breach happens
- Manage the reputation of your organization and of those affected by the breach

Visit www.IDT911.com or call **888.682.5911** today to learn more.

Identity Theft Resource Center would like to thank **IDT911** for their continued financial support.

Information and Background on ITRC

Information management is critically important to all of us - as employees and consumers. For that reason, the Identity Theft Resource Center has been tracking security breaches since 2005, looking for patterns, new trends and any information that may better help us to educate consumers and businesses on the need for understanding the value of protecting personal identifying information.

What is a breach? The ITRC defines a data breach as an incident in which an individual name plus a Social Security number, driver's license number, medical record or financial record (credit/debit cards included) is potentially put at risk because of exposure. This exposure can occur either electronically or in paper format. The ITRC will capture breaches that do not, by the nature of the incident, trigger data breach notification laws. Generally, these breaches consist of the exposure of user names, emails and passwords without involving sensitive personal identifying information. These breach incidents will be included by name but without the total number of records exposed.

There are currently two ITRC breach reports which are updated and posted on-line on a weekly basis. The *ITRC Breach Report* presents detailed information about data exposure events along with running totals for a specific year. Breaches are broken down into five categories, as follows: business, financial/credit/financial, educational, governmental/military and medical/healthcare. The *ITRC Breach Stats Report* provides a summary of this information by category. Other more detailed reports may be generated on a quarterly basis or as dictated by trends.

It should be noted that data breaches are not all alike. Security breaches can be broken down into a number of additional sub-categories by what happened and what information (data) was exposed. What they all have in common is they usually contain personal identifying information (PII) in a format easily read by thieves, in other words, not encrypted.

The ITRC currently tracks seven categories of data loss methods: Insider Theft, Hacking, Data on the Move, Subcontractor/Third Party, Employee error/negligence, Accidental web/Internet Exposure and Physical Theft.

The ITRC breach list also tracks four types of information compromised:

- Social Security number
- Credit/Debit Card number
- Email/Password/User Name
- Protected Health Information (PHI)

Methodology

The ITRC breach list is a compilation of data breaches confirmed by various media sources and/or notification lists from state governmental agencies. This list is updated daily, and published each Tuesday.

Breaches on this list typically have exposed information which could potentially lead to identity theft, including Social Security numbers, financial account information, medical information, and even email addresses and passwords. ITRC follows U.S. Federal guidelines about what combination of personal information comprise a unique individual, and the exposure of which will constitute a data breach.

Records Reported:

This field has been changed to more accurately reflect the circumstances surrounding the number of records exposed. The numeral "0" has been replaced with "Unknown" - recognizing the number of records may have been reported to some other entity (i.e. government or law enforcement), but is not provided in the information available to the ITRC.

Breach categories:

Business: This category encompasses retail services, hospitality and tourism, professional, trade, transportation, utilities, payment processors and other entities not included in the other four sectors. It also includes nonprofit organizations, industry associations and non-government social service providers as well as life insurance companies and insurance brokers (non-medical).

Educational: Any public or private educational facility, from pre-school through university level. This category does not include scholarship providers, after school entities, or tutoring organizations.

Medical/Healthcare: Any medical covered entity (CE) or business associate (BA), as defined by HIPAA, in the healthcare industry. Also includes healthcare facilities and organizations which may be attached to schools and universities, and *may* include pharmaceutical manufacturers. Insurance companies may vary by industry – medical and long term insurance providers will be classified as medical healthcare. (Included on hhs.gov list).

Covered entities are defined in the HIPAA rules as (1) health plans, (2) health care clearinghouses, and (3) health care providers who electronically transmit any health information in connection with transactions for which HHS has adopted standards. A "business associate" is a person or entity that performs certain functions or activities that involve the use or disclosure of protected health information on behalf of, or provides services to, a covered entity.

Government/Military: Any city, county, state, national or military entity; or a department within one of these entities. In the event that a medical facility is also a government or military entity, it will be listed under Government/Military. Entities such as Veteran Association Medical Centers (VAMC) will be included in this sector.

Banking/Credit/Financial: This sector includes entities such as banks, credit unions, credit card companies, mortgage and loan brokers, financial services, investment firms and trust companies, payday lenders and pension funds (401 savings plans)

2014 Data Breach Category Summary

How is this report produced? What are the rules? See last page of report for details. Report Date: 1/5/2015

Totals for Category: Banking/Credit/Financial	# of Breaches: 43 % of Breaches: 5.5%	# of Records: 1,198,492 %of Records: 1.4%
Totals for Category: Business	# of Breaches: 258 % of Breaches: 33.0	# of Records: 68,237,914 %of Records: 79.7%

Totals for Category: Medical/Healthcare	# of Breaches: 333 % of Breaches: 42.5	# of Records: 8,277,991 %of Records: 9.7%
Totals for All Categories:	# of Breaches: 783 % of Breaches: 100.0	# of Records: 85,611,528 %of Records: 100.0%

2014 Breaches Identified by the ITRC as of: 1/5/2015

Total Breaches: 783
Records Exposed: 85,611,528

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. Unless noted otherwise, each report includes breaches that occurred in the year of the report name (such as "2014 Breach List", or became public in the report name year, but were not public in the previous year. Each item must be previously published by a credible source, such as Attorney General's website, TV, radio, press, etc. The item will not be included at all if ITRC is not certain that the source is real and credible. We include in each item a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. When records are encrypted, we state that we do not (at this time) consider that to be a data exposure. However, we do not consider password protection as adequate, and we do consider those events to be a data exposure.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.

The ITRC would like to thank IDentityTheft911 for its financial support of the ITRC Breach Report, ITRC Breach Stats Report and all supplemental breach reports.

2014 Breaches Identified by the ITRC as of:	8/27/2015
--	------------------

Total Breaches:	783
Records Exposed:	86,095,373

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. Unless noted otherwise, each report includes breaches that occurred in the year of the report name (such as "2014 Breach List"), or became public in the report name year, but were not public in the previous year. Each item must be previously published by a credible source, such as Attorney General's website, TV, radio, press, etc. The item will not be included at all if ITRC is not certain that the source is real and credible. We include in each item a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. When records are encrypted, we state that we do not (at this time) consider that to be a data exposure. However, we do not consider password protection as adequate, and we do consider those events to be a data exposure.

What is a breach? A breach is defined as an event in which an individual's name plus Social Security Number (SSN), driver's license number, medical record, or a financial record/credit/debit card is potentially put at risk – either in electronic or paper format.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.

The ITRC would like to thank IDentityTheft911 for its financial support of the ITRC Breach Report, ITRC Breach Stats Report and all supplemental breach reports.

Northwestern Lake Forest Hospital, Northwestern Memorial Hospital, and Northwestern Medical Group, affiliates of Northwestern Memorial HealthCare (collectively NMHC), are committed to protecting the confidentiality and security of our patients' information. Regrettably, this notice concerns an incident involving some of that information. On October 21, 2014, we learned that a password protected, unencrypted laptop containing patient information was inside an employee's vehicle that was stolen on that same date. The employee immediately contacted law enforcement who began an investigation.

ITRC20141202-09	University Hospitals	OH	11/28/2014	Electronic	Medical/Healthcare	Yes - Published #	692

An employee of University Hospitals improperly accessed medical and personal information of 692 patients over a three-year period, the hospital system said Friday. The employee, who has been dismissed, breached the hospital system's electronic medical records, allowing the person to gain names, home addresses, phone numbers, email addresses, medical and health-insurance account numbers and other patient information, UH said. The electronic medical records also provide information on patients' office visits.

On September 24, 2014, a laptop computer and cell phone were stolen from a BWH physician during an armed robbery that took place off of BWH premises. During the robbery, the assailants forced the victim to disclose the pass codes/encryption keys to these devices. Possession of the pass codes/encryption keys along with the devices themselves could provide an individual the ability to view information stored on the laptop or cell phone. The theft was immediately reported to the Boston Police Department. We do not know if the information on these devices has been accessed. To date, neither the laptop nor the cell phone has been recovered.

In early April, 2014, during an audit of our billing data base, Athena, we identified suspicious access that prompted an investigation. Our investigation revealed that a user ID and password assigned to a former employee had been used to access information in the Athena system between April, 2013 and March, 2014. Our investigation determined that the information accessed with the user ID and password for the majority of patients included their name, date of birth and the last four digits of their Social Security number. A small group of patients had additional information accessed which included their name, dates and times of service, provider and facility names, patient account numbers (which may have included Social Security numbers), date of birth, and treatment information, such as diagnosis.

ITRC20141107-01	Home Depot - Emails	GA	11/7/2014	Electronic	Business	Yes - Unknown #	Unknown

As if the credit card breach at Home Depot didn't already look enough like the Target breach: Home Depot said yesterday that the hackers who stole 56 million customer credit and debit card accounts also made off with 53 million customer email addresses. In an update (PDF) released to its site on Thursday, Home Depot warned customers about the potential for thieves to use the email addresses in phishing attacks (think a Home Depot "survey" that offers a gift card for the first 10,000 people who open the booby-trapped attachment, for example). Home Depot stressed that the files containing the stolen email addresses did not contain passwords, payment card information or other sensitive personal information.

A healthcare data breach possibly occurred in Montana when PHI was mailed to the wrong individual. The VA Montana Health Care System is facing a potential health data breach after a veteran's PHI was accidentally mailed to the wrong person. U.S. Army, Air Force and National Guard veteran Kip Braden told The Billings Gazette that he was expecting authorization from the VA for outpatient services. However, when the mail arrived, the paperwork included a different veteran's name, address, date of birth, Social Security information and his medical condition.

ITRC20141020-05	City of Dallas / Dallas Fire-Rescue	TX	10/15/2014	Electronic	Government/Military	Yes - Published #	1,000

A small number of Dallas Fire-Rescue (DFR) Emergency Medical Services (EMS) laptop computers in DFR ambulances became unaccounted for between January 1, 2011 and August 29, 2014. During that time period, you were treated by Dallas Fire-Rescue paramedics and some of your protected health information was collected onto an EMS laptop. On August 15, 2014, the City determined that one of the software applications on these EMS laptops was not properly protected. If the EMS laptop used during your treatment was one of those unaccounted for, and if the paramedics performed an electrocardiogram (EKG) on you, that EKG and possibly your name, age and gender, may have become accessible to one or more persons not entitled to that information.

A state-issued laptop was stolen along with several other items from a car in Rock Hill on Thursday, police say. The laptop, a cell phone, a Wi-Fi hotspot device and other items were taken from a parked car that may have been left unlocked, according to a Rock Hill police report. The laptop belonged to a 31-year-old clinical therapist who works in the Spartanburg Area Mental Health office, a location overseen by the state department of mental health.

ITRC20141014-11	Penn Highlands Brookville / Barry J. Snyder, MD / M&M	PA	10/13/2014	Electronic	Medical/Healthcare	Yes - Published #	4,500

Penn Highlands Brookville, a high quality healthcare service for the Brookville area, today confirmed a data security incident which may involve personal information for patients of Barry J. Snyder, MD. On August 14, 2014, Penn Highlands Brookville discovered that a computer server containing patient information for Dr. Snyder was compromised when a third party intruder potentially had access to information contained on the server. Dr. Snyder's office, located in Fairmount City, did not experience the data security event directly, but rather a third party vendor located in Ohio hired to maintain records for Dr. Snyder may have been compromised. The types of information affected may include a patient's name, address, date of birth, driver's license number, Social Security number, phone number, insurance information, medical information, and gender.

Regrettably, we are writing to inform you of an incident involving some of that information. On May 9, 2014, we became aware that a seldom-used folder containing patient billing information relating to dates prior to August 2012 had inadvertently been left accessible via the internet. Upon learning this, we immediately secured the folder and removed it from public view. We also began an internal investigation which initially led us to believe that the patient information in the folder was not readable. However, on September 5, 2014, we obtained new information that suggested that the patient information may have been readable and included your name, date of birth, address, telephone number, Social Security number, health insurer name, radiology procedure and diagnosis.

On or about July 24, 2014, Owensboro Medical Practice, PLLC, and its business associate, Research Integrity, LLC, learned that a spreadsheet containing protected health information was wrongfully copied and removed from the offices of Research Integrity by a former employee. This occurred despite the fact that only properly authorized persons at Research Integrity had access to the spreadsheet. The type of information contained on the database included patient names, addresses, telephone numbers, dates of birth, Social Security numbers and health condition(s). The spreadsheet had information of less than only 10% of the total number of Owensboro Medical Practice patients.

ITRC20140930-09	Texas Wellness Incentives and Navigation (WIN) Project	TX	9/29/2014	Electronic	Medical/Healthcare	Yes - Unknown #	Unknown

The University of Florida and the Texas Health and Human Services Commission (HHSC) are partners for the Texas Wellness Incentives and Navigation (WIN) Project for Medicaid patients. In a newly disclosed breach, the University of Florida, acting as a partner of the HHSC, sent letters to Houston area physicians requesting health records for WIN project enrollees. Due to a reported mail merge error, however, some University inquiries were mistakenly sent to the wrong physician. UF reports that the only information shared with the incorrect physician was the patient's name, Medicaid STAR+PLUS identification number, and date of birth.

EmblemHealth is notifying approximately 800 GHI members about a privacy breach that was discovered in July 2014. On July 3, 2014, it was discovered that checks and explanations of payment documents intended for a radiology provider were sent to an incorrect address as a result of a manual data processing error whereby two numbers in the provider's billing address were transposed. Statements processed during the period of June 13 to July 8, 2014 intended for the provider were inadvertently sent to the incorrect address. These documents included the members' name, health plan identification number, dates(s) of service and certain other claims-related details. The members' Social Security number or financial information were not disclosed.

ITRC20140923-02	Cook County Health and Hospital Systems	IL	9/22/2014	Electronic	Medical/Healthcare	Yes - Published #	767
As part of a collaborative public health project, an individual working on behalf of CCHHS sent an e-mail to an authorized individual at a non-Cook County healthcare organization in July 2014.							

The transmitted information contained protected health information that was not encrypted. Encryption is a process that converts the information into a format that cannot be easily understood by unauthorized people. This was identified immediately after the e-mail was sent. The receiving organization deleted the e-mail without reviewing the contents. There has been no indication of unauthorized use of the information and CCHHS officials have notified affected individuals. The information contained patient names, date of birth, race, ethnicity, gender, zip code, medical record number, date of service, place of service, type of lab test performed and lab test results. The information DID NOT contain patient addresses or social security numbers.

ITRC20140922-05	Brandon Hall School	GA	9/17/2014	Paper Data	Educational	Yes - Unknown #	Unknown

A Henry County woman is outraged after she purchased a used filing cabinet and found students' personal information inside.

The files had the Brandon Hall School logo and so much more. Elizabeth Darsey found them in a used filing cabinet she purchased at a used furniture warehouse.

"Disciplinary actions, legal actions, lawsuits, employment issues, everything," Darsey told Channel 2's Kerry Kavanaugh. Brandon Hall is a private school in Sandy Springs. The files date back to the 2003-2004 school year and include information about students and staff. Kavanaugh found copies of personal checks from school donors, expulsion letters, even information from someone's job application. "It includes his family name, his given name, his country of origin, his Social Security number," Darsey said. "I think they need to contact every parent and student that is included in this to let them know."

ITRC20140922-02	Recorder of Deeds - St. Louis	MO	9/20/2014	Electronic	Government/Military	Yes - Published #	19,000

A top official in the St. Louis Recorder of Deeds Office has been fired for a vital records security breach of about 19,000 unauthorized copies of death certificates. The acting Recorder of Deeds, Jennifer Florida, says Preggy Meeker, the alleged suspect, allowed employees to log into Missouri's vital records system by using the passcode of an employee who retired two years ago. Both are a violation of the law and could lead to possible identity theft.

Midwest Orthopaedic Center (MOC) in Illinois also reported a breach to HHS. They listed McKesson Business Performance Services as the business associate involved. In a notice on their web site, MOC writes, in part: On June 6, 2014, McKesson reported that one of its former affiliates had unintentionally made records containing MOC patient information potentially accessible on the Internet. McKesson indicated that the information was accessible using very specific Google search terms between December 1, 2013, and April 17, 2014. We immediately began working with McKesson and determined that the potentially accessible records may have contained some of our patients' billing information, including patients' names, insurance information, diagnosis codes, and, in some instances, social security numbers.

Central Utah Clinic – More than 31,000 patients at Central Utah Clinic may have had their personal information accessed in a data breach. While the hospital says it successfully defends against many cyber attackers every month, the hospital's IT professionals discovered on June 9 that an attacker had compromised one of the hospital's servers that contained radiology reporters dating back from 2010. The server also contained some names, dates of birth, Social Security numbers, addresses and phone numbers. There is no evidence that information was viewed or copied during the breach. "These attacks are an unfortunate aspect of information technology and modern healthcare is not immune from this," said Central Utah Clinic CEO Scott Barlow.

ITRC20140902-06	Memorial Hermann Health System	TX	8/29/2014	Electronic	Medical/Healthcare	Yes - Published #	10,604

An employee of the Memorial Hermann Health System inappropriately accessed confidential information of more than 10,000 patients over a 6 1/2-year period, the chain announced Friday. The system on Friday began mailing letters notifying affected patients of the breach, one of the largest of its kind in the Texas Medical Center. The accessed data included medical records, health insurance information and, in some cases, social security numbers. It did not include financial information, such as credit cards or bank accounts.

ITRC20140902-05	Home Depot	GA	9/2/2014	Electronic	Business	Yes - Published #	56,000,000

Home Depot may be the latest retailer to suffer a credit card data breach. The Atlanta-based home improvement retailer told The Associated Press Tuesday that it is looking into "unusual activity" and that working with both banks and law enforcement. "Protecting our customers' information is something we take extremely seriously, and we are aggressively gathering facts at this point while working to protect customers," said Paula Drake, a spokeswoman at Home Depot, declining to elaborate. She said the retailer would notify customers immediately if it confirms a breach.

The purpose of this letter is to inform you of a recent incident that may affect the security of your personal and protected health information. We are providing this notice to ensure that you are aware of the incident, so that you may take steps to protect your information should you feel it is appropriate to do so. On June 30, 2014, the Arcadia Police Department informed us that it was investigating a former AltaMed employee on suspicion of identity theft. During their investigation, law enforcement stated it had recovered a hard drive and other evidence containing the personal information of individuals. They believed the information recovered had been used by individual(s) to commit or attempt to commit identity theft or fraud. However, citing its ongoing investigation, law enforcement would not disclose whether those records were AltaMed records, the identities of the individuals to whom the information related, or the reason for its belief that the information had been misused.

ITRC20140812-18	Office of Alexander J. Tikhtman, MD	KY	7/9/2014	Electronic	Medical/Healthcare	Yes - Published #	2,376

The covered entity (CE), offices of Alexander J. Tikhtman, M.D., lost an unencrypted flash drive containing the electronic protected health information (ePHI) of 2,376 individuals. The flash drive was not recovered. The ePHI included patient's names, treatment and diagnostic information, and in some instances, dates of birth and social security numbers. The CE provided breach notification to the affected individuals, HHS, and the media. It also established a dedicated call center for questions related to the breach and offered free credit monitoring and identity theft services to individuals whose social security numbers were breached. The CE updated its privacy and security policies and procedures relating to the use, storage, and transmission of PHI. OCR obtained assurances that the CE completed the corrective action listed above.

It's an identity thief's paradise – the payroll department of a thriving local business. Not only do Human Resources records contain names, ages and Social Security numbers (SSN), they also often contain direct deposit information for the banks that workers use. So you'd think that a company would be extremely careful when new staffers are hired who may access those files. Yet employees at San Mateo Medical Center (SMMC) in California have learned that it's easy for criminals to slip through the cracks and the result is a bump in identity theft risk.

We are writing to notify you of an incident that may affect the security of your personal information. We are providing this notice to ensure that you are aware of the incident and so that you may take steps to monitor your identity, financial accounts, and any existing credit file should you feel it is appropriated to do so.
 On July 2, 2014, Lasko Group, Inc. became aware of the fact that certain customers who made recent on-line parts purchases from Lasko Products, Inc. (Lasko) and Air King America (Air King) were the targets of fraudulent "phishing" emails from an unknown third party purporting to relate to these orders. Upon learning of this, Lasko and Air King immediately launched an internal investigation into this incident. This investigation revealed that these fraudulent emails could be related to unauthorized hacking activity into our computer network.

Manhattan District Attorney Cyber R. Vance, Jr., this week announced the indictment of six men worldwide in connection with the theft of personal and financial information from user accounts at eBay subsidiary StubHub. In March 2013, StubHub discovered that more than 1,000 customer accounts had been compromised by attackers who used the breached accounts to purchase tickets without the account holders' authorization, then resold those tickets at a profit.

ITRC20140728-02	Self Regional Healthcare	SC	7/25/2014	Electronic	Medical/Healthcare	Yes - Published #	38,906

On May 27, 2014, Self Regional employees discovered that two unauthorized individuals broke into one of its facilities and stole a laptop belonging to SRH. The theft occurred on Sunday, May 25, 2014. Upon learning of the burglary, SRH contacted law enforcement and worked closely with them. Both intruders have been arrested. The thief responsible for stealing the laptop confessed to the crime and stated that he destroyed and disposed of the laptop in a lake. The police sent divers in the water, but SRH and police have been unable to recover the stolen laptop to date

ITRC20140708-01	Department of Managed Health Care (DMHC) / Blue	CA	7/8/2014	Electronic	Government/Military	Yes - Published #	18,000

On May 16, 2014, the DMHC discovered that Blue Shield of California had inadvertently included provider Social Security numbers (SSNs) in the rosters Blue Shield provided to the DMHC in February, March and April, 2013. Because they did not recognize their error, Blue Shield did not mark the rosters as confidential or otherwise alert the DMHC to the inclusion of the SSNs. The DMHC's subsequent investigation revealed that the DMHC had produced the rosters in response to ten PRA requests made to the DMHC between March 2013 and April 2014. In addition to the SSNs, the rosters included providers' names, business addresses, business telephone numbers, medical groups, and practice areas.

The personal information of up to 160,000 students, faculty, staff and alumni at Butler University could be in danger. University officials warned of a major data breach after the California arrest of an identity suspect last month who had a flash drive with Butler employees' personal information. The data included birthdays, social security numbers and bank account information. The breach even puts the information of those who applied to Butler but never attended at risk.

Iowa Medicaid Enterprise, a division of the Iowa state Department of Human Services (DHS), reported on Friday that more than 800 Medicaid clients' data was mailed to the wrong clinic.

The Medicaid division, muscatinejournal.com reports, made a mailing error in sending patient names, phone numbers, state identifications and types of enrolled programs back in February. Additionally, Medicaid Director Jennifer Vermeer said that the misdirected data had been destroyed and now providers will have use a secure web portal to download listings.

ITRC20140620-01	Rady's Children Hospital #2	CA	6/19/2014	Electronic	Medical/Healthcare	Yes - Published #	6,307

The internal investigation of the initial breach included a review of other areas of the hospital that used a "training file" for testing competency, according to the hospital. The review discovered that in August, November and December 2012, an employee e-mailed a training exercise with patient information to three job candidates. Another six applicants came to the campus to take the test on Rady's computer, but had no ability to save, store or transmit data. This file contained information on 6,307 patients, but also had no Social Security or financial data. "We are making every effort to contact the three recipients of the email to confirm that the email and file have been destroyed," according to the hospital statement

Fidelity National Financial, Inc. ("FNF") is writing to inform you of an incident that may have involved your personal information. FNF is the parent company of the Fidelity National Title Group title companies, including Fidelity National Title Insurance Company, Alamo Title Insurance, Commonwealth Land Title Insurance Company, and Chicago Title Insurance Company, which provide title insurance and real estate settlement services across the country. Upon learning of the incident, FNF promptly notified federal law enforcement and began an investigation. FNF retained a third-party security expert to conduct a forensic investigation, which remains ongoing.

People outside of AT&T Mobility accessed an unknown number of customer Social Security numbers and call records, AT&T has confirmed. The breach took place between April 9 and April 21, but was only disclosed this week in a filing with California regulators. While AT&T wouldn't say how many customers were affected, state law requires such disclosures if an incident affects at least 500 customers in California.

ITRC20140530-01	Monsanto	MO	5/29/2014	Electronic	Business	Yes - Published #	1,300

Monsanto Co. (MON)'s data security was breached at its Precision Planting unit, exposing employees and customers to potential misuse of credit card information and tax identification numbers. Fewer than 1,300 farmer customers were affected by the breach, Christy Toedebusch, a spokeswoman for the St. Louis-based company, said in an e-mail yesterday. Monsanto discovered on March 27 that an outside party had accessed Precision Planting servers, the company said in a May 14 letter to the Office of the Attorney General in Maryland, where 14 state residents may have been affected.

ITRC20140527-14	Boulder Community Health	CO	5/14/2014	Paper Data	Medical/Healthcare	Yes - Unknown #	Unknown

After a reported HIPAA violation, Boulder Community Health (BCH) of Colorado is in the process of investigating its third patient data breach since 2008, according to The Daily Camera. The context of the breach is a bit bizarre in that, unknown to BCH, someone mailed patients' records to their homes to prove that BCH is lacking in security.

The American Institutes for Research, a major research and testing organization with a significant presence in K-12 education in the United States, suffered a serious data breach earlier this month. After one of the organization's servers was hacked, the sensitive personal information of as many as 6,500 current and former employees, including Social Security numbers and personal credit card information, was compromised, an AIR spokesman confirmed during an interview Monday with Education Week. No student or client information was affected.

Precision Planting LLC, a wholly owned subsidiary of Monsanto, provides farm equipment and services to agricultural customers. To provide these services, we collect business-related information about the companies we serve along with some personal information pertaining to individual business owners, employees and contractors. On March 27 we discovered unauthorized access to our systems had occurred by an outside party. Files on the affected servers contained personal information, including customer names, addresses, tax identification numbers (which in some cases could be Social Security Numbers), and (in some cases) financial account information.

ITRC20140422-04	McBroom Clinic	TX	3/14/2014	Electronic	Medical/Healthcare	Yes - Published #	2,260

An incident has occurred that may involve your personal information. In early January 2014, the McBroom Clinic asked a company to help us with a practice audit. We gave this vendor access to limited patient information in accordance with HIPAA and Texas requirements. This information included insurance coverage and payment data, some of which was sent to the vendor on a portable USB flash drive. The vendor received the information on January 9, 2014, but did not see the USB flash drive in the package and discarded it with the packaging in line with their disposal procedures. We learned of this inadvertent disposal on January 17, 2014, when the vendor asked for another copy of our information. When we asked, the vendor said they had not seen or accessed the USB flash drive.

ITRC20140402-02	PracMan	AL	4/2/2014	Electronic	Medical/Healthcare	Yes - Published #	3,100

Decatur, Ala.-based PracMan, a billing company utilized by many Alabama physicians, has announced a subcontractor caused a data breach that exposed the personal and health information of 3,100 patients. On Jan. 10, PracMan learned an IT subcontractor copied and stored computer files from a PracMan computer to an unsecured server in August 2013. The error occurred when the subcontractor was repairing a PracMan computer.

ITRC20140327-09	El Agave Mexican Restaurant	MN	3/26/2014	Electronic	Business	Yes - Published #	200

Fairmont police have received hundreds of reports of credit and debit card fraud since a local restaurant's computer was hacked. Since early last week, police in the southern Minnesota town have received more than 200 reports of credit and debit cards being used to make fraudulent purchases in at least 13 states, including Texas, Arizona and New York. Police say all the cards have been linked to a Fairmont restaurant, El Agave. Officials believe a point-of-sale hack took place at the restaurant.

This message is to inform you of a recent security breach that affects you. A document containing some of your personal information was inadvertently emailed from the Financial Aid Office to 14 Loyola Law School students at approximately 6 p.m. on Tuesday, March 18, 2014. The information included name, internal system ID number (not student ID number), Social Security number, graduation year, academic status (not grades) and program (JD, LLM), as well as loan type and amount, for some students graduating in spring 2014. The 14 recipients, all members of the class graduating in May 2014, were each contacted and asked to purge the file from their systems and confirm the deletion once complete.

High Point-based Cornerstone Health Care has alerted more than 500 patients after a laptop at one of its practice locations that contained patient information was stolen earlier this year. On Feb. 26, Cornerstone began reaching out to 548 patients of Cornerstone Neurology in High Point to let them know about the theft, and took steps to better secure laptops going forward.

Most people would enjoy getting a \$7,000 check in the mail. In the case of one West Seattle man, all the check indicated was his identity had been stolen. "The check had my Social Security Number on it as well as another woman's name," he said, asking us not to release his name. "I immediately became suspicious." The check arrived two weeks ago and claimed to be a tax refund. This despite the fact the man already knows he's not getting one, in fact he owes the federal government money.

ITRC20140218-01	Blue Shield of California	CA	1/15/2014	Electronic	Medical/Healthcare	Yes - Unknown #	Unknown

Blue Shield of California is notifying some agents that their Tax Identification Numbers – which are often the agents' Social Security Numbers – were accidentally disclosed to some of the agents' clients who attempted to pay their bills online.

In a letter dated today, BSC writes that the problem with SSN exposure existed between December 20, 2013 and January 16, 2014, but that the SSN were not presented in a format that would make the number immediately recognizable as a Social Security number. Nor, writes, BSC, do they have indication of misuse of the agents' names and SSN.

On December 1, 20 14 an Apex employee sent an email that mistakenly contained an internal company spreadsheet with the personal information of certain other Apex employees. Upon learning of this error on December 24, 2013, Apex immediately commenced an internal investigation to determine the scope of this incident and retained specialized data security counsel to guide the company through its response. Although these investigations are ongoing, it has been determined that the spreadsheet contained employee names, Social Security numbers and salary information.

ITRC20140127-07	Department of Labor	CT	1/24/2014	Paper Data	Government/Military	Yes - Published #	27,000

The Connecticut Department of Labor has determined that approximately 27,000 of the 250,000 tax forms mailed out to individuals who collected unemployment compensation payments in 2013 contain a printing error. The Labor Department is required to report unemployment compensation payments of \$10 or more on form UC-1099G. Due to an error in the printing process, the forms contain the correct information on the top portion of the form, while the bottom half of the document contains information pertinent to another individual.

ITRC20140127-04	PCC Structural Inc.	OR	1/24/2014	Electronic	Business	Yes - Unknown #	Unknown

Sometime between Dec. 30 and Jan. 10, an unidentified person left documents in a Portland-area restaurant that included confidential information about PCC Structural Inc. employees. The security breach was low-tech, unlike the recent data disaster at Target Corp., in which hackers stole credit-card and other personal information for as many as 110 million customers. But in some ways, though it involved far fewer people, the PCC breach was more serious because the documents contained employees' names and social security numbers – the all-important digits that are like gold in the hands of identity thieves.

According to court documents, from approximately February 2009 to February 2011, Brame was employed as a social worker at the Alamance County Department of Social Services (Alamance DSS) in North Carolina. Brame was responsible for investigating claims of abuse and neglect against minors and disabled adults. As part of her official duties, Brame had authorized access to extensive identifying information – including names, dates of birth and Social Security numbers – of Alamance DSS clients, including abuse victims and recipients of various state benefits, and of witnesses in official investigations.

Navy veteran Sylvester Woodland said he couldn't believe what he was seeing Wednesday night when he logged onto the Veteran Affairs' E-Benefits website. "It gave me a different person's name, each and every time I came back," Woodland said. At first I thought it was just a glitch, but the more I thought about it, I said, wait a minute, this is more than a glitch, this is a breach." Woodland was on the VA's E-Benefits website trying to track down his own history for a bank loan. Instead, windows kept popping up displaying other veterans' medical and financial information.

ITRC20140121-07	United Natural Foods	CA	1/8/2014	Electronic	Business	Yes - Unknown #	Unknown

In early October, 2013, UNFI was notified by local police in Auburn, California, of two separate incidents in which several old/retired UNFI laptops were recovered by police during the arrest of two homeless individuals. Upon receiving notification from Auburn police, UNFI discovered that the source of the laptops appeared to be a UNFI-owned warehouse in Auburn, the security of which was breached sometime between September 3, 2013 and October 3, 2013. Inspection of the remaining contents of the warehouse revealed that additional laptops and hard drives in storage there, as well as certain paper payroll files, may have been compromised

2014 Breaches Identified by the ITRC as of: 1/5/2015

Total Breaches: 783
Records Exposed: 85,611,528

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. Unless noted otherwise, each report includes breaches that occurred in the year of the report name (such as "2014 Breach List"), or became public in the report name year, but were not public in the previous year. Each item must be previously published by a credible source, such as Attorney General's website, TV, radio, press, etc. The item will not be included if the ITRC is not certain that the source is real and credible. We include, for each incident, a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. When records are encrypted, we state that we do not (at the time) consider that to be a data exposure. However, we do not consider password protection as adequate, and we do consider those events to be a data exposure.

What is a breach? A breach is defined as an event in which an individual's name plus Social Security Number (SSN), driver's license number, medical record, or a financial record/credit/debit card is potentially put at risk – either in electronic or paper format.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.

The ITRC would like to thank IDentityTheft911 for its financial support of the ITRC Breach Report, ITRC Breach Stats Report and all supplemental breach reports.
